Reason for stopping:

EKG Data
Worst-case ST Slope: ST Level:
Pre-exercise EKG:
Exercise EKG:

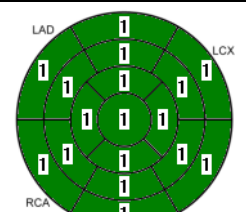

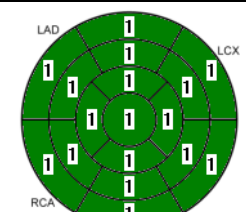

Heart Rate and Blood Pressure
Resting blood pressure: /
Baseline heart rate: Target heart rate:
Percent of Max HR: % Predicted Max HR:
Blood pressure at peak exercise: /
Maximum heart rate achieved:
Rate pressure product:
METs:

EKG SUMMARY
1. No significant ST changes with exercise.
2. No CP with exercise.
3. Exercise capacity was good.
4. Normal heart rate response to exercise.
5. Normal blood pressure response to exercise.
6. No arrhythmias were observed.

ECHOCARDIOGRAM FINDINGS

- **Rest Echo Study:** Normal wall motion and systolic thickening of all left ventricular segments. No resting wall motion abnormalities. Resting ejection fraction is %.
- **Immediate Post-Exercise Echo Study:** Increased wall motion and systolic thickening of all left ventricular segments with decrease in end-systolic dimensions. (Visual estimate) No immediate post exercise abnormalities noted.

IMPRESSION
